TradingBoard.ai

Cloud & AI Platform for Algo Trading

[MENTOR CENTRIC]

Introduction

What is TradingBoard.ai?

TradingBoard.ai is a cloud-based AI platform that allows traders to design, backtest, optimize, and automatically trade strategies in minutes including:

- Full lifecycle management for Futures, Stocks, CFDs, Forex, and Crypto
- **Portfolio management,** risk control, and continuous AI-driven re-optimization
- Simple script **FalconScript™** easily understandable by **non-IT** traders
- High-performance **Nautilus**/Python/Rust engine for **advanced** traders
- **Collaborative 'Mentor Hub':** A dedicated workspace for trading educators to manage student performance, share group strategies, and monetize expertise
- Embedding **generative & interpretable AI** directly into the trading workflow

The Vision: Voice-to-Execution

Imagine this scenario:

While commuting, you simply tell the **TradingBoard.ai mobile companion**:

> *"Build a trend following strategy for Crude Oil futures using FalconScript. Backtest from 2017 to 2022 and, if the Profit Factor exceeds 1.5 the last 5 months, share the logic with my Head of Research for review."*

By the time you reach your desk, the backtest is complete, the risk report is generated, and the strategy is ready to be added to your portfolio—deployable to a paper or live account with a single click.

AI Assistant

Hello! I'm your TradingBoard AI Assistant.

I can help you design, backtest, and deploy robust trading strategies in minutes. I'm here to handle the complexity of:

- Generating FalconScript from your ideas.
- Backtesting & Optimization for portfolio robustness.
- Live Re-optimization based on current market data.

How can I assist your trading today?

Analyze the live trades of the ES_15m_TrendFollowing_BreakOut_3 strategy over the last 3 months and suggest changes we should make to the signal and its input parameters to improve performance and prevent over-optimization.

AI Assistant

Hello! I'm your TradingBoard AI Assistant.

I can help you design, backtest, and deploy robust trading strategies in minutes. I'm here to handle the complexity of:

- Generating FalconScript from your ideas.
- Backtesting & Optimization for portfolio robustness.
- Live Re-optimization based on current market data.

How can I assist your trading today?

Analyze the live trades of the ES_15m_TrendFollowing_BreakOut_3 strategy over the last 3 months and suggest changes we should make to the signal and its input parameters to improve performance and prevent over-optimization.

FalconScript for non-IT traders

- Very simple even for non-IT traders
- 99,9% compatible with EasyLanguage™ and PowerLanguage™
- Arbitrage enabled - Allows trading on multiple datasets
- Portfolio enabled - Allows sorting strategies in portfolio backtests and Portfolio Walk Forward Analyse (PWFA)
  - e.g. `PositionScore` and `SetSortOrder` Known, for example, from Amibroker

```
// MA Crossover Example Logic
Inputs: FastLength(9), SlowLength(21);
Vars: FastMA(0), SlowMA(0);

FastMA = Average(Close, FastLength);
SlowMA = Average(Close, SlowLength);

If FastMA Crosses Above SlowMA Then
    Buy ("Cross_LE") Next Bar at Market;

If FastMA Crosses Below SlowMA Then
    Sell ("Cross_SE") Next Bar at Market;
```

Nautilus+python+rust engine

- High-performance **Python**/**Nautilus**/Rust engine for **advanced** traders
- **AI-Powered Strategy Migration**: Seamlessly AI-translate existing strategies from MQL (MetaTrader), C# (NinjaTrader), or LEAN-Python (QuantConnect) into high-performance Nautilus/Python/Rust engine

Individual Strategy Robustness

- **High-Performance Backtesting:**
  Validate trading ideas against high-fidelity historical data using our transpilation engine (FalconScript to Python) for maximum precision
- **Multivariate Parameter Optimization:**
  Identify the most stable parameter sets across different market regimes to avoid "curve-fitting"
- **Walk-Forward Optimization (WFO)**:
  A rigorous process of optimizing on "In-Sample" data and validating on "Out-of-Sample" data to ensure strategy adaptability
- **Monte-Carlo Analysis:**
  Stress-test strategies by simulating thousands of randomized trade sequences to determine the probability of maximum drawdown and ruin

Institutional Portfolio Management

- **Portfolio-First Architecture:**
  Manage and analyze hundreds of strategies as a single, unified entity.
- **Portfolio Walk-Forward Analysis (PWFA)**:
  Our core innovation—modeling the development of an entire diversified portfolio on out-of-sample data to predict real-world performance.
- **Risk-Aware execution:**
  Embedded tools for automated risk management on portfolio level

Flexible Data Options for Every Strategy

- **Vendor-Agnostic Support (BYOD)**: Integration for professional third-party real-time & historical feeds (e.g. IQFeed/CQG).
- **Integrated Broker Feeds**: Direct connection via Brokers (e.g. IBKR) for real-time market data and historical feeds
- **Zero-Cost Entry**: Access to free historical data for initial testing and strategy development
- **Fundamental Intelligence**: Integrated corporate metadata—earnings, market capitalization, and volume analytics—accessible directly within the workspace
- **Smart Futures Management:** Elimination of manual contract switching. Automatic mapping from continuous backtest data to live broker contracts (e.g., June/Z24) with a hybrid option for manual control

Institutional-Grade Order Execution

- **Direct Broker Integration**: Seamless API-driven connectivity for fully automated order generation and execution
- **Continuous Execution Synchronization**: Real-time logging of live fills and market conditions to enable high-fidelity post-trade analysis and automated strategy re-optimization
- **Strategic Rollout (Initial Partners)**:
  - **Interactive Brokers (IBKR)**: Global multi-asset reach (equities, futures, forex)
  - **Binance**: For high-liquidity digital crypto asset trading and arbitrage
  - **Alpaca**: Commission free for global equities and crypto asset trading —ideal for fractional share portfolios

Augmented Generative & Interpretable AI

- **Explainable AI (XAI) for Strategy Design**:
  - Generates deterministic, human-readable FalconScript code from natural language ideas.
  - Eliminates the "Black-Box" effect by allowing traders to audit every line of logic before deployment.
- **Logical Consistency & Risk Guardrails**:
  - Automated static analysis to identify hidden risks like signal collisions, overfitting, and slippage.
  - Mandatory multi-level validation: Code must pass automated logical limit controls and rigorous backtesting.
- **Human-in-the-Loop Architecture**:
  - AI Advisory Mode: The agent acts as a co-pilot for monitoring and alerts rather than an autonomous black-box.
  - **Final Confirmation: No live deployment** occurs **without final manual user confirmation**, ensuring safe capital management.
- **Continuous Adaptive Re-optimization:**
  - AI agent identifies regime shifts and suggests strategy adjustments based on real-time performance results.

Methodology – First Strategy & Portfolio Exec

- **Step 1: AI-Assisted Design** (Minutes, not Days)
  - Transform natural language trading ideas into deterministic, human-readable logic instantly via FalconScript
  - Or seamlessly import existing EasyLanguage or PowerLanguage code for an immediate cloud upgrade.
- **Step 2: Institutional-Grade Validation**
  - Execute high-fidelity backtests and robustness audits to eliminate overfitting and identify regime-shift sensitivity
  - Identify hidden risks such as slippage before committing capital
- **Step3: Portfolio Aggregation & Optimization**
  - Organize multiple strategies into unified portfolios for holistic risk and correlation management
  - Run cloud-native Portfolio Walk-Forward Analysis (PWFA) to model long-term performance on out-of-sample data
- **Step 4: One-Click Broker Synchronization**
  - Select your target broker (e.g., **Interactive Brokers, Alpaca, or Binance**)
  - Securely link your API keys in the encrypted cloud environment
- **Step 5: Live-Market "Sandbox" Deployment**
  - Deploy to a Broker Demo/Paper Account with one click
  - Monitor the Execution Agent as it handles orders, logs, and real-time risk limits in the cloud

Collaborative Mentor Hub

- **Centralized Oversight & Risk Control:**
  - Unified dashboard to monitor multiple student portfolios, risk levels, and performance metrics in real-time
  - The mentor acts as a "Risk Officer" for the entire student community
- **Strategy Distribution:**
  - Distribute strategies to mentees with and without native TradingBoard.ai accounts.
  - Eliminates the "version control" nightmare—all students trade the most recent, optimized version of the mentor's logic
- **Monetization & Growth Engine:**
  - Proprietary Licensing: Securely license your intellectual property (FalconScript) to your community
  - Automated Revenue Sharing: Integrated system for recurring subscription splits and educator payouts
- **Dynamic Incentives (The Affiliate Loop):**
  - Discount & Reward: Mentors generate custom referral codes that grant students significant discounts while securing a **lifetime revenue share** (e.g., X% of subscription) **for the mentor**

Let’s Build the Future of Trading

We are setting a new standard for transparency, scalability, and intelligence in the markets. Whether you are a solo **trader,** a **mentor**, or a **tech enthusiast**,
we want to hear from you.
